## THREADLOCKER GELS

A better, faster and cleaner way to apply threadlocker to bolts, studs or anywhere it is needed. The gel goes on without drips, globs or messy waste. Threadlocker Gel is a single component, anaerobic gel that cures when confined in the absence of air between close fitting metal surfaces. This product cures rapidly on plated, oily metal surfaces or inactive surfaces. Locks and seals while preventing parts loosening due to vibration. Protects threads from corrosion. Removable with hand tools for easy disassembly.

- Gel formula is **thicker than standard threadlockers** and is easier to use on vertical or hard to reach applications.
- **Pump dispenser** creates no mess and provides exceptional control for reduced waste — saves time and money.
- Replaces lock washers and plastic inserts.
- **Eliminates vibration loosening** for maximum safety - keeps equipment and those around it safe from failure.
- **Seals against leakage** — protects against rust and corrosion.
- **Cures without cracking or shrinking** for a stronger hold and protective seal.
