## SAVE 30% ON GLADHAND SEALS!

### GLADHANDS & REPLACEMENT SEALS

Air brake gladhands are coupling devices used to connect service lines (blue) and emergency air lines (red) from the truck or tractor to the trailer. The gladhand couplers have a rubber seal, which prevents air from escaping.

- **Eliminate leaks** at the gladhand by replacing gladhand seals when they are worn out.
- **When using colored seals, put the proper color in each type of gladhand connector.** Parking brake lines and fittings are red, while the service brakes are blue.
- **Wipe gladhand cavity clean** before installing new seal.
- **Rotate the seal several times** once it's in place to insure proper seating.

**Gladhands**
