IBS No. 16712

\$99.95

## Grabit Damaged Screw Remover & DriveGrip Assortment

Extractors 1/4 - 3/8 (M5 - M10)

IBS No. 794R

## EXTRACTORS

- **Power-Out:** 7 sizes, double sided, can handle up to 1-1/8" screws.

These patented **double-edged** screw extractors are made from **hardened chrome vanadium steel** with a **burnished finish**. The cutting edges are polished, and the **part number and dimensions** are laser marked on the shank for easy identification.

- **Drill-Out:** 4 sizes, designed for removing stripped screws from 1/4" to 1/2".

A **drill bit and extractor in one tool**, the DRILL-OUT creates a unique interaction between drill bit and extractor, resulting in **maximum impact and break out** ability. Broken bolts and studs are **removed quickly and easily** without damaging the fastener threads.

- **Grabit:** 4 sizes with drill function on one end and extracting function on the other end. Designed for #4 to #24 screws.

The GrabitPro **quickly and easily removes most damaged screws** such as Hex, Phillips, Torx, and Square Drive from wood, plastic or metal up to 3 inches in length. The **serrated extracting end** of the tool results in greater torque for hard to remove bolts and screws. The design of the shaft make them **compatible with "quick change" chuck systems** or can be chucked directly into a drill. Good for **multiple extractions with a single tool**.

- **Spiral Screw Extractors:** 9 sizes for up to 3-1/2" bolts and screws.

Round shank helical flute screw extractors are used to **remove broken screws, bolts, studs, pipe and lubrication fittings without damage to the threaded hole**. They are designed with a **left hand helical flute** to firmly grip and remove any right hand threaded.
