

SEALED & SECURED IN A SNAP DEUTSCH DT TERMINALS

SAVE \$44 ON OUR NEW DT ASSORTMENT

DEUTSCH CONNECTORS & TERMINALS are environmentally sealed electrical connectors designed for applications where moisture, salt spray, dirt or dust could damage connections and result in failure. Ideal for use in cable-to-cable applications on engines, transmissions, under the hood or in the cab.

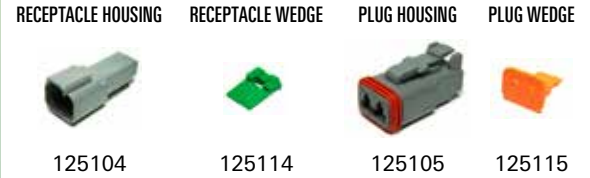

- **A single contact system** terminates all connectors utilizing common tooling for fast, easy, secure connections.
- **Positive locking mechanism** keeps connectors mated even in extreme vibration.
- **Silicone seals** allow connectors to withstand extreme temperature and moisture; properly mated and sealed connections will withstand immersion under three feet of water without loss of electronic qualities or leakage.
- **No additional sealing** required — connectors are **sealed when snapped** together for fast and easy assembly.
- **Fail-safe connector assembly** designed to allow installation only after wedge locks and pins are inserted properly.
- **Housing shells** are made of **flame-retardant, high-grade thermoplastics** and rated -55°C to +125°C for maximum performance in extreme environments
- **Copper crimp-type terminals** form a secure, air-tight connection that protects against oxidation and temperature instability that can cause electrical resistance - for reliable power flow.
- **Stainless steel sleeve over contact fingers** protects fingers from damage to extend contact life and reduce replacement.
- **Pins have no retention tangs** for less risk of damage during assembly and re-work.
